

### BATO Toolbag "Backpack" with plastic bottom. Textile.

On the outside on the left side, this backpack has a metal hanger for suspension, underneath a side pocket that can be closed with velcro, good size for the mobile etc. The backpacks carrying straps are padded so the weight of the tool does not cut into the shoulders, and the bag is also done with thick pillows that provide comfort for the user. Wide strap with buckle ensures that the bag is not pulled backwards. The front of the backpack is fastened a number of rings vertically, so here is a good opportunity to tie something firmly. The front room saves on smart keyhanger with clips, smaller zipper and two open spaces. The large compartment in the bag is fitted with a powerful zipper that can be lighted all the way down to the bottom and fully opened, giving this type of toolbag space and clarity. Inside the bag is provided with several large and small spaces (see picture) elastic bands for tool holdings. Convenient plastic base makes this backpack suitable for all professional groups. Outside dimensions: Height 46cm. Width 36.5cm. Depth 17.5cm.

Weight: 2,034 kg.
