

23 PC 1/4 and 3/8 BoltBiter Set

Struggling with a rusted, rounded, or stripped screw head? The new SATA BoltBiter fastener extraction tool sets (13/23 pieces) are the solution. Thanks to their unique fastener gripping technology and bi-directional design SATA BoltBiter fastener extraction tools reliably remove stubborn nuts without damaging sockets and workpiece. The ability to re-use a damaged fastener makes the BoltBiter the perfect tool for specialized components. Innovative tapered flute openings allow the socket to easily connect with the fastener, eliminating the need for a striking tool and reducing jamming in the socket compared to traditional extraction. Minus-sized sockets fit a wide range of damaged fasteners. Both sets contain a ratchet with flush mounted reversing lever that allows users to change direction onehandedly without removing the wrench.

Weight: 0,000 kg.
